## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to a charged particle exposure apparatus, classified in class 250, subclass 492.22.
- II. Claims 20-23, drawn to a factory, device manufacturing method, and method of maintenance of charged particle devices, classified in class 250, subclass 492.2.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I is drawn to a charged particle beam apparatus and does not require a factory or network to perform its recited function. The subcombination has separate utility such as a semiconductor manufacturing plant and method of use.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
